Algebraic Geometry: Scheme-based

Guo Haoyang

March 2025

Contents

1 Introduction **3**

2 Sheaves and presheaves **3**
2.1 Categorical information . . . 3
2.2 Local information:Stalk and germs . . . 3
2.2.1 Sheafification . . . 3
2.3 Local properties of sheaves . . . 3

3 (Locally) Ringed spaces & Schemes **3**
3.1 Affine schemes and schemes . . . 3
3.2 Local properties of schemes . . . 3
3.2.1 Reducedness . . . 3
3.2.2 Normality . . . 3
3.2.3 Regularity and singularity . . . 3
3.2.4 Cohen-Macauley . . . 3

4 Sheaf of modules **3**
4.1 $\mathcal{O}_X$-modules, ideal sheaves . . . 3
4.2 Quasi-coherent sheaves: 'Finite dimensional' modules . . . 3
4.3 Coherent sheaves: The 'Noetherian' case . . . 3

5 Projective schemes and projective morphisms: Example of a quasi-coherent sheaves **3**
5.1 Quasi-coherent sheaf on Proj S . . . 3
5.2 Serre's twisting sheaves $\mathcal{O}(n)$ . . . 3
5.3 Blow-ups . . . 3

6 Sheaf cohomology: machinary **3**
6.1 Some motivations . . . 4
6.2 Cech cohomology . . . 4
6.3 Cohomology of $\mathcal{O}_X$-modules . . . 4

7 Sheaf cohomology: exmaples of calculations **4**
7.1 An important example: cohomology of a projective scheme $H^i(\mathbb{P}^n(k), \mathcal{O}(m))$ . . . 4
7.2 Cohomology of quasi-coherent modules . . . 4

8 Bundles and divisors: Toolkits for geometors **4**
8.1 Line bundles: Locally free sheaves . . . 4
8.1.1 Correspondence between line bundles and invertible sheaves . . . 4
8.1.2 Embedding schemes into a projective space . . . 4
8.1.3 Classification of vector bundles over the projective line . . . 4
8.2 Divisors . . . 4
8.3 Correspondence between line bundles and divisors . . . 4

9 Curve Theory **4**
9.1 Riemann-Roch . . . 4
9.2 Classification of curves in $\mathbb{P}^3$ . . . 4
9.3 Surface Theory . . . 4

10 Calculus **4**
10.1 Differentials 4
10.2 Sheaf of Kähler differentials 4

1 Introduction

2 Sheaves and presheaves

2.1 Categorical information

2.2 Local information:Stalk and germs

2.2.1 Sheafification

2.3 Local properties of sheaves

3 (Locally) Ringed spaces & Schemes

3.1 Affine schemes and schemes

3.2 Local properties of schemes

3.2.1 Reducedness

3.2.2 Normality

3.2.3 Regularity and singularity

3.2.4 Cohen-Macauley

4 Sheaf of modules

4.1 $\mathcal{O}_X$-modules, ideal sheaves

4.2 Quasi-coherent sheaves: 'Finite dimensional' modules

4.3 Coherent sheaves: The 'Noetherian' case

5 Projective schemes and projective morphisms: Example of a quasi-coherent sheaves

5.1 Quasi-coherent sheaf on $\operatorname{Proj} S$

5.2 Serre's twisting sheaves $\mathcal{O}(n)$

5.3 Blow-ups

6 Sheaf cohomology: machinary

measure of failure of gluing local information into global

6.1 Some motivations

6.2 Cech cohomology

6.3 Cohomology of $\mathcal{O}_X$-modules

7 Sheaf cohomology: exmaples of calculations

7.1 An important example: cohomology of a projective scheme $H^i(\mathbb{P}^n(k), \mathcal{O}(m))$

7.2 Cohomology of quasi-coherent modules

8 Bundles and divisors: Toolkits for geometors

8.1 Line bundles: Locally free sheaves

8.1.1 Correspondence between line bundles and invertible sheaves

8.1.2 Embedding schemes into a projective space

8.1.3 Classification of vector bundles over the projective line

8.2 Divisors

8.3 Correspondence between line bundles and divisors

9 Curve Theory

9.1 Riemann-Roch

9.2 Classification of curves in $\mathbb{P}^3$

10 Surface Theory

11 Calculus

11.1 Differentials

11.2 Sheaf of Kähler differentials
